

Solar/Electric Row Crop Tractor by ScoringAg

New dual electric or solar powered Row Crop Tractor is an electronic marvel and handles more than one job and built to be used on sustainable small farms. The environmentally friendly new row crop Tuff-Bilt Solar/Electric Tractor by ScoringAg is the answer for many issues the small farmer is facing now.

The affordable row crop Tractor for small farms in only 44 inches to 60 inches wide depending on the model with mid and or rear hitches. This new electric solar powered Tractor has zero pollution and requires no oil changes, or fuel, no warm-up time with plenty of power and a set of lights and reflectors for working early morning or late evenings or spraying at night.

Driven by an 18-horse-power, 36 volt electric fan-cooled drive motor, these tractors are work horses. A brilliant addition to the electric tractor is the on-board, three-bank smart charger that helps prolong battery life. There is even an option for solar charging the batteries! For about a dime's worth of local electricity, just plug it in and be fully charged in about eight to ten hours. The 6 heavy duty, 6-volt deep cycle marine-type batteries weight is balanced on the row crop tractor frame for maximum traction in rough soils.

This new Tractor enables any produce and small farm operator to transport rapidly any load on wheels with no physical effort. They can come with tracks if needed for extreme conditions.

Available attachments for farming needs, soil preparation, planting, cultivating, plant spraying, harvesting as well as light or heavy towing covers some of the many chores of a small farm or community operation. An attached canopy option will make the job easier too.

These Solar/ Electric row crop Tractors from Tuff-Bilt are built in the USA for ScoringAg to address the daily needs in the small farm and sustainable agriculture industry that maybe off the grid [or.in](#) areas where normal services are non-existent.
