

ScoringAg TreeTubes© **The ultimate insect barrier for Citrus and Fruit Trees**

ScoringAg TreeTubes© are highly UV resistant and will last for many years. Large raindrops are broken into a mist, preventing heavy rain damage; some filters through the net and the rest runs down to the drip line. Even hail just bounces off.

The ScoringAgTreeTube© method creates a physical barrier to insects and worms for each tree, preventing infection without sprays or poisons of any kind.

As an added benefit, the ScoringAg TreeTubes© are extremely strong and stretchy. They are made out of special woven polyester fiber which is patented and the TreeTubes© are manufactured only for ScoringAg.

Bagged Cherry Tree in Canada

**Material is used in the Cherry and other Fruit Industry since 2002
ScoringAg is using the same material for the Citrus Industry**

**New Citrus Planting
with no protection**

**new tree protected
